

Selection Values

Breeders usually want to select for more than one trait simultaneously. It is difficult to identify the "best" animal when many traits and consequently many breeding values are involved. A selection value combines different weighted breeding values in a single value. Breeding values are weighted scientifically according to their economic importance and heritability and therefore include the advantages and disadvantages of different traits in a balanced manner. Each breeding value is multiplied by its weighting factor (table 1) and added to obtain a single selection value, such as cow value. The genetic contribution of each trait to cow value is indicated and is calculated by multiplying additive variation by the weighting factor.

Table 1: The traits and breeding values used to compile the "Cow Value".

Sub-index	Weight (%)	Breeding value	Breeding value weight (%)
Fertility	37%	AFC	-10%
		ICP	-27%
Calving ease	5%	Birth direct	-4.5%
		Birth maternal	-0.5%
Milk	14%	Milk	+14%
		Weaning weight	+24%
Growth	24%	18 month	-6%
Cow weight	20%	Mature weight	-14%

Table 2: The advantages and disadvantages of the use of selection values to select animals.

Advantages	Disadvantages
* Selection on total genetic profitability of the animal. * VERY easy to use. * Good traits compensate for some less favourable traits. * Can easily see an animal's strengths and weaknesses. There is not an ideal value.	* Corrective matings for specific traits are not possible. * A below average animal with an extreme value can appear to be better. * Economically important traits and their relative weights change with time, such as consumer demands and conditions.

Practical aspects

All animals in the selection list are sorted in descending order on Cow Value. It is therefore a convenient way to select the best animals on merit and identify cull animals. It can also be used to select promising young animals. Please note that animals with incomplete information will usually not have good breeding values and will therefore appear at the bottom of the list.

What is the 'ideal' animal?

The 'ideal' animal will theoretically have the highest possible positive values for all sub-indices.

Fertility: Negative breeding values indicate more fertile animals and therefore fertility is negatively weighted. This will result in positive indices. Fertility has the highest weighting, with 37%.

Calving ease: An animal with negative breeding values for Birth direct and Birth maternal will have a positive Calving Ease value. The economic weight is 5%.

Milk: Animals with a high milk (wean maternal) breeding value, will have a higher milk value. Milk has a positive weighting of 24%.

Growth: Animals with positive breeding values for Weaning weight will have a higher value. The economic weight is 24%.

Cow weight: Mature weight has a negative weighting because larger cows have higher maintenance requirements.

Cow value: The sub-indices are combined to calculate cow value.

Growth value: Combination of traits in post-wean growth tests.

Production value: The sum of 80% of the Cow Value and 20% of the Growth value.

Breeding objectives

A breeding objective is still essential since two animals with different strengths and weaknesses can have the same selection value. The bull with the highest value can therefore not be selected blindly on the highest selection value. Select bulls carefully, for example:

Bull to use on heifers: High calving ease and average growth and cow weight. These traits are antagonistic to each other since high calving ease is associated with less growth and lower cow weight, resulting in a small animal, which will be more likely to experience difficulty calving in future.

Bull to breed replacement heifers: High fertility, good milk and growth, average cow weight.

Bull for terminal crossbreeding (ONLY on full grown crossbred cows that calve easily and is in a good environment): Maximum growth, Fertility and milk is not important if the offspring is destined to be slaughtered.

Description of traits and breeding objectives

Trait	EBV Index	Description/Measurement	Objective	General guidelines for breeding value indices						
				<80	80	90	100	110	120	>120
Calving Ease	Birth weight	Birth weight (birth direct)	Easy calving	Heavy						Light
	Birth mat.	Birth weight of cow/daughters' calves (birth maternal)	Easy calving	Heavy						Light
Calf Growth	Weaning weight	Weaning weight (wean direct)	Heavy weaner calves	Light						Heavy
	Milk	Milk production of cow/daughters (wean maternal)	Heavy weaner calves	Low						High
Fertility	Age at first calving (AFC)	Age at first calving and early calving within season (Heifer fertility)	Fertile heifers	Late calving						Early calving
	Inter-Calving Period (ICP)	Combination of 3 intercalving periods of cows (Cow fertility)	Fertile cows	Long ICP						Short ICP
Growth	Post-wean weight	Combination of 12- and 18 month weights of bulls and heifers	Above average post-wean growth	Light						Heavy
	Mature weight	Combination of first 3 mature weights at the wean of the cow's calf	Average weight	Light						Heavy

Additional notes:

Breeding objectives depend on the environment in which the animals must perform, for example: Intensive systems with a lot of food can support larger animals, while it is advised to select for animals of average size in extensive systems with less food.

Darkly shaded areas indicate the generally accepted favourable range in which to select. Note that objectives sometimes fall outside this range.

Animals with an index above 100 perform better than the average live animal in the breed. A high index for birth weight therefore indicates a smaller (more favourable) calf.

Most animals in the breed (70%) are average and have an index between 90 and 110.

Traits are genetically correlated to each other. Selection for heavy weaner calves will lead to heavy mature animals (high maintenance requirements) and heavy birth weights (possible difficult calving).

Milk breeding values must be in proportion to weaning weight: the cow must have enough milk to raise her calf, and too low milk production is unfavourable.
